Chimneys and Stovepipe

Amerivent® Model TLC Chimney

The AmeriVent® TLC (Twist-Lock Chimney) is a double-wall, insulated Type A-Vent designed for All-Fuel applications. TLC is built with corrosion resistant 304 Stainless Steel inner liner and outer casing and 1" Solid Pack Insulation. Tested and Listed to UL 103-HT

Amerivent® Model HS Chimney

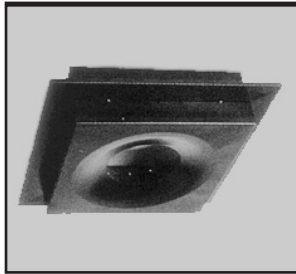

This triple-wall, air-insulated chimney is UL listed 103HT for continuous venting of flue gases not exceeding 1000°F. Additional UL tests have been conducted at 1400°F for one hour and 2100°F for 10 minutes. A clearance of only 2" to combustibles is required. Built for strength, Model HS combines two corrosion-resistant stainless steel walls, a sturdy galvanized steel wall, and a ceramic fiber refractory blanket. HS chimney pipe is light enough for one person to install.

Amerivent® Model HSS Chimney

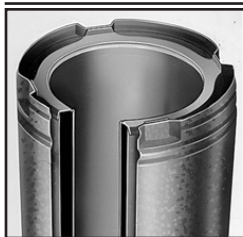

All the high performance temperature engineered features of Model HS are found in the HSS chimney system, plus a stainless steel outer wall increases protection against corrosion.

ProLine® Chimney Components

Aesthetically satisfying to design-conscious consumers, this selection augments standard Model HS chimney components. Features include a "wide open" design cap, an adjustable roof support and face plate, a trim sleeve, and a durable, high-temperature black powder-coat finish on all painted components.

Amerivent® Model 10FB Chimney

Versatility is "built into" Model 10FB, which is engineered to vent all gas or liquid-fueled appliances and non-airtight solid-fueled fireplace stoves. The chimney is listed UL 103 for venting flue gases not exceeding 1000°F under continuous operating conditions. Model 10FB is also UL tested at 1400°F for one hour and 1700°F for 10 minutes.

Amerivent® Model DCC Double-Wall Black Stovepipe

The AmeriVent® Model DCC double-wall black stovepipe is ideal for use with Model HS/HSS Chimneys. It features a stainless steel inner liner and air-insulated double-wall design. Model DCC is UL listed for 6" minimum airspace clearance to combustibles to the rear and side walls. Screw joint assembly assures easy installation and inspection, and its drip-free design prevents creosote leakage. A 5' telescoping pipe section is also available.

TLC Chimney Length
TLCEK Insulated Elbow Kit

TLCT Insulated Tee with Tee Cap
TLCITP Insulated Tee Cap

How to Select AmeriVent Chimneys

These prefabricated chimneys offer the installer the basic components for standard installations plus special purpose parts and finishing accessories. The basic chimney system consists of Ceiling or Roof Support (use a Support only at point where chimney originates), Chimney Pipe Sections, Firestop Assembly (for 2 or more floors), Attic Insulation Shield, Flashing, Storm Collar, and Cap.

For outside installations (through the wall), the following components are required: Tee, Support Bracket Assemblies, Wall Support, Wall Thimble, Chimney Pipe Sections, and Cap.

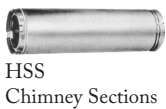

Example: If X is 4", roof is 4/12.

Calculate your roof pitch to ensure that you have the correct flashing. Standard flashings are flat to 6/12 pitch-4" skirt.

To price a complete chimney:

1. Determine the type of chimney termination desired and type of installation required for your application. Determine the desired individual fittings and accessories needed (not including pipe sections, see step 4) to complete this installation.
2. Determine the height of your chimney termination above the roof. It should extend at least 3 feet above the highest point where it passes through the roof of a building (point B), and at least 2 feet higher than any portion of the building within 10 feet.
3. Calculate total height (H) of your chimney installation by adding the height of the remaining chimney required (from point "B" to the support).
4. Determine number of chimney sections necessary to satisfy total height (H) calculation from 3. above. Remember to subtract 1 inch for each chimney joint to allow for overlap that occurs when chimney sections are joined.
5. Add prices of chimney sections required to prices of fittings and accessories.

AmeriVent® Direct Vent

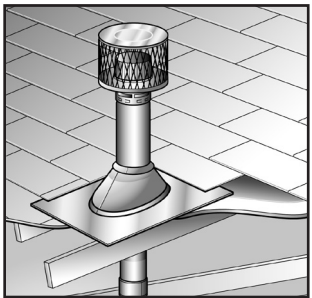

Available in 4" x 6 5/8" and 5" x 8" sizes, AmeriVent Direct Vent provides a complete line of components for all typical installations, both vertical and horizontal. AmeriVent Direct Vent factory-assembled construction is unique with a galvanized steel outer wall and superior corrosion-resistant stainless steel inner wall. It fits most existing start collars.

The inner wall factory-installed graphite gasket makes for easy secure twist-lock installation. The 360° rotation allows elbows to rotate in either direction, while still maintaining the secure lock system.

AmeriVent Direct Vent is for use only on appliances listed or certified for use with AmeriVent Direct Vent. Approved for many hearth appliances. Contact Customer Service or our web site for a complete listing.

AmeriVent® Pellet Pipe

Available in 3" and 4" diameters and 6" through 5' vent pipe lengths, the AmeriVent Pellet Pipe line includes all the components needed for venting pellet appliances. Selected components are also available in a black, power-coated finish. UL-listed for type L, low-temperature venting systems, AmeriVent Pellet Pipe features sturdy, double-wall construction with a stainless steel inner wall and an aluminum/zinc-coated outer wall. Fiberglass gaskets are factory-installed at every joint to prevent fly ash leakage.

AmeriVent® Flexible Gas Vent Segment

UL-listed for use as a connection from an appliance to Type B gas vent, the double-wall flexible gas vent segment features air-insulated construction and Type B male/female ends for easy connection with AmeriVent. Requiring only 1" clearance to combustibles, the double-wall flexible connector can be used in unconditioned spaces, such as attics and crawl spaces, and is available in 3" to 5" diameters and 2' to 5' lengths.

Quality AmeriVent systems you can count on from American Mets Products Group

Flexiliner® Flexible Gas Vent Reliner Kit

With Flexiliner® reliner kits, you are able to meet the demand for adapting masonry chimneys to safe venting of gas appliances. New product design uses sheet metal screws for quick, convenient connection.

This Flexiliner® reliner features a crimped spiral lock seam that makes the vent stronger and more damage-resistant. Kits are available in 3" to 8" diameters with 25' and 35' liners and 5', 10' and 15' extensions. The system is UL-listed to zero clearance between the liner and the inside of the chimney, and zero clearance between combustibles and the outside of the chimney.

AmeriVent® Single -Wall Connector System

Faster, easier hook-ups of one or more appliances to the gas vent are assured with the AmeriVent® super flexible connector pipe system available in 3" to 5" diameters. This UL-listed connector eliminates the need for cutting, crimping, fitting or screw fastening at joints, and requires only 1" clearance to combustibles. The single-wall corrugated aluminum pipe section may be compressed 4" per foot to shorten lengths. Coordinated wye and tee fittings and a snap-lock connecting system combine to produce perfect connections to AmeriVent® gas vents.

AmeriVent® Type B Gas Vent

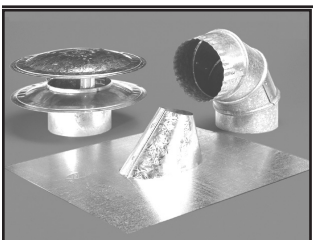

Thanks to its lightweight air-insulated, double-wall metal construction, AmeriVent® Type B Gas Vent offers unsurpassed efficiency, economy, and ease of installation.

Listed by Underwriters Laboratories, AmeriVent® meets the safety and performance requirements for forming a continuous passageway from an approved gas appliance to the termination of the vent above a structure's roof. AmeriVent's unique double-wall construction eliminates lengthy warm-up periods, allowing vents to reach operating temperatures almost instantly and resulting in rapid removal of flue gases. Airspace between the inner pipe of reflecting aluminum and the outer pipe of corrosion-resistant galvanized steel is your assurance of strength, safety, and durability.

This complete venting system provides round pipe in 3" to 30" diameters and oval pipe in 4" to 6" equivalent diameters. Various pipe lengths are offered. Whether the job entails single- or multi-appliance hook-ups, over 500 coordinated components enable the installer to meet the required venting system. AmeriVent® requires only 1" clearance to combustible materials, and installation is easily accomplished by one person with its unique snap-lock connecting system. Versatile AmeriVent® may be used with water heaters, boilers, furnaces, and space or wall heaters approved for connection to Type B Gas Vents in residential and commercial applications.

Amerivent® Standard Sheet Metal Products

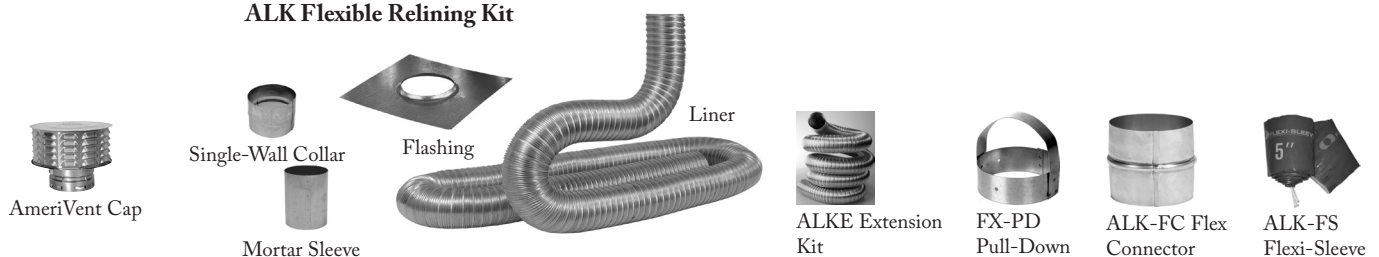

Versatility is "built into" Model 10FB, which is engineered to vent all gas or liquid-fueled appliances and non-airtight solid-fueled fireplace stoves. The chimney is listed UL 103 for venting flue gases not exceeding 1000°F under continuous operating conditions. Model 10FB is also UL tested at 1400°F for one hour and 1700°F for 10 minutes.

Flashing Selection Guide

Please read this flashing installation guide before placing your order. Because of conflicting or overlapping codes, it is sometimes difficult to determine which type of flashing to use.

The following data may be helpful in selecting the right flashing for specific installations in the Southern California area.

NOTES:

1. Dimensions shown are measured from base of riser to edge of skirt or base.
2. The Standard Flashing is generally acceptable for composition or shingle roofs, unless pitch of roof, shingle exposure, or roofing material is unusual. It is a good idea to check your codes.
3. FHA Standards require the FHA flashing shown to the left, depending on the roof covering or other factors.
4. For tile roof flashings, see Dead Soft Aluminum Flashings.
